TimeReg is suitable for companies based on project management. TimeReg delivers a set of user-friendly time registration possibilities not seen in the area before.

TimeReg is an extension to Elmer Systems Business Suite - the market leading business software (CRM accounting, supply chain management, products, customers, web shop etc.). TimeReg can be used as a stand alone system or in combination with the other parts of Elmer Systems Business Suite.

TimeReg gives the user the ability to register spent time on projects or in production. This can be done by the standard software (full client) or by using the web-interface.

The solution is crossplatform - suitable for both PC and Mac. Media bureaus, agencies etc. are normally based on a strong projectmanagement and time-based focus. The web-login minimizes the need for non-graphic software to be installed on graphic workstations.

The price of TimeReg is depending on the quantity of users, the need for webinterface etc.

Elmer Systems TimeReg and Business Suite has a standard capacity up to 8 terabytes but can later be extended.

TimeReg can be used in many business areas - e.g. consulting, agencies, production based companies etc.
