Elmer Systems WorkFlow is a system to easily organize production workflow. The system is suitable for production- or project based organisations.

WorkFlow is an extension to Elmer Systems Business Suite - the market leading business software (CRM accounting, supply chain management, products, customers, web shop etc.). TimeReg can be used as a stand alone system or in combination with the other parts of Elmer Systems Business Suite.

With WorkFlow users can easily create and organize projects or production-jobs

**WorkFlow - how it works**

WorkFlow is separated into more parts, that can be used separately or together: The main idea behind WorkFlow is that it has to be easy for the user to create jobs in the productionline when the order has been received from the customer. WorkFlow is used to create and organize the projects or production-jobs.

Before creating the job in the production the product and its subroutines has to be approved by relevant people. This is done prior transmitting the job to the actual production. This is done to maximize the quality in production and to maximize the efficiency in the company.

After this the job will be transferred to the productionlist and can be sorted to show the most relevant jobs. WorkFlow also supports colorcodes on the productionlist to quickly reprioritize the jobs.

In Elmer Systems WorkFlow users can almost automatic create productionjobs - just by hitting a button. This is easily done and at the same time minimizing the need for double registration. Relevant information - customer name, product names, part-ID's etc, drawing-ID's will automatically be transferred to the job.

The productionpages can be fulfilled by hand or on the computer. This can be done directly in the application or by using the web / HTML.

At the same time users can inform other users about the status of the project, experienced problems etc. This is

done to minimize future problems in similar projects.

The price of WorkFlow is depending on the quantity of users, the need for web interface etc.

Elmer Systems WorkFlow and Business Suite has a standard capacity up to 8 terabytes but can later be extended.

WorkFlow kan anvendes indenfor mange brancher - feks produktionsvirksomheder, projektorganisationer mfl.

Elmer Systems WorkFlow is a part of Elmer Systems Business Suite, the market leading business solution in many areas. Elmer Systems WorkFlow can be extended with more modules:

**Elmer Systems CRM** - the market leading CRM-system including accounting, call center, invoicing, campaigns
